

BONE LEVEL **SB-II**

Anker Dental Implant System

Designed to Smile

Anker Dental Implant System

For centuries, clinicians have attempted to replicate teeth through implantation.

By the end of the 1970's groundbreaking studies, led by Dr. Per-Ingvar Branemark, had emerged.

They concluded that pure titanium integrates with bone tissue without complication.

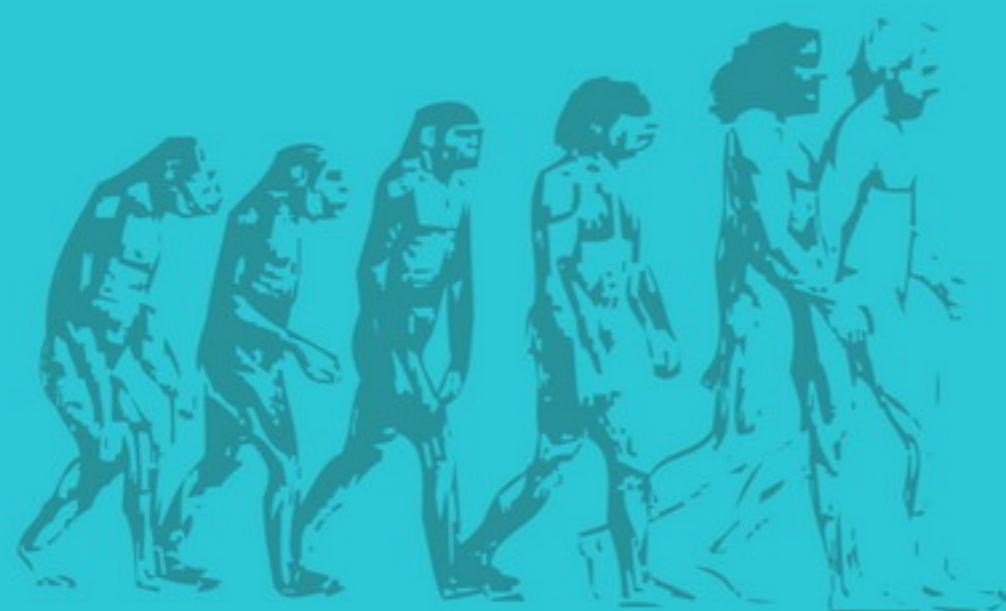

Intraorally, an abutment can be connected to an implant

and used as a tooth replacement with predictable clinical outcomes.

Early publications refer to the dental implant as an "anchor," or "anker" in German

and Danish. In honor of the innovation, evolution and heritage of implants,

Alliance Global Technology proudly presents the Anker Implant System.

Surgical Instruments Care and Maintenance

Caution! The drills need to be sterilized before use

1. Do not use cleaning solution or disinfectant containing chloride or acid (caution with the running water too much chlorinated)
2. Avoid solution with aldehyde, owing to the ability of this product to keep the proteins
3. Eliminate meticulously all the post-operative residues on the drills, or inside for the drills with internal irrigation
4. Use a nylon brush to avoid, as much as possible, shocks and contacts with other drills or instruments
5. Do not clean, in the same ultrasonic box, the implant drills with other tools which material is different
6. Use suitable cleaning solutions. Respect the manufacturer directions for use
7. Rinse, and then dry the drills immediately after the cleaning process. It is necessary to be meticulous during the drying
8. Stock the drills in clean and dry areas
9. Sterilization by wet heat autoclaving 134°C (273° F) 40 minutes. Make sure that the elements, inside the autoclave, are not rusted
10. For the drills with removable stops: these steps must be carried out individually on the dismantled component

Lifetime Warranty

In the case of failure of implantation, Alliance would offer the replacement by submitting the fully documentation including the failure form, before and post surgery radiograph taken, and the failed implant within 6 months from the beginning of the event.

COMPANY INTRODUCTION

Alliance Global Technology Company established in 2008, has grown to become a worldwide dental implant and dentistry provider. We collaborate between government, industry, and academics including senior scientists from prestigious research institutes. Our parent company, Anchor Group, focus on fasteners producing especially for aerospace and motor industry for over three decades. It's our strong advantages that Alliance acquired parent company's precision technical ability and consistent dedicating on implant dentistry innovation.

The chairman of Anchor Group and of Alliance, Tompson Chang, is committed to the level of distinction in the design and fabrication of quality components for the dental implant world. Our mission is to improve the health and well-being of those in need.

Alliance has launched numerous live surgery dental implant training programs in conjunction with universities and dentist. Aimed at dentist intent to learn and improve the skills in dental implantology.

Alliance Global Technology is located in Kaohsiung, Taiwan. ,Thus far, Alliance always care about the long-term relationship with dentists in worldwide, concerns how to meet more and more patients requirement.

Anchor group the new headquarter, with area of 1.5 hectare construction project estimate finish in the near future.

SURFACE TREATMENT

Anker Dental Implant Surface Treatment : S.L.A / SLA-CaP

- ① Following the unique sandblasting, large grit , acid-etched is tended to increase the roughness of the surface and amplify BIC (Bone-Implant Contact). Surface roughness evolves a better consequence after treatment accordingly to SEM **Figure 1** is even better than those leading peers. The surface roughness increased 39% after S.L.A treatment, further eases the attachment of Osteocyte, and boost Osseointegration.
- ② Fixtures are sent to multi-step ultrasonic cleaning with high purity water (Reverse Osmosis). Once the surface is completely cleaned with no residues, it could be ready to pack in the Class 1000 clean room. The packed implant will be sent to γ - rays sterilization, and further cell biocompatibility test in the microbiology lab to verify the sterilization authentication. Alliance Implants are ready to launch into the market along all the rigorous quality in-house control.
- ③ There are no residues shown on the surface of Anker Implant under SEM (Scanning Electron Microscopy). This also demonstrates Anker Implant is reliable with high biocompatible capacity.

Cell Attachment Study

Hydrophilicity Testing

Ultrasonic Cleaning
(Class 1000 Clean Room)

FEATURES

The principle goal of implant design is to enhance osseointegration, shorten treatment time, and improve reliability and esthetics. To that aim, the Anker implant has:

Anodization

- Anodization the abutment is treated with golden TiO₂ layer for better esthetics and biocompatibility with the soft tissue.
- The interface prevents self-rotation during restoration.

Platform Switching

- Allows for biologic width, conducting soft and hard tissue growth and reducing bone loss at osseointegrative surfaces.
- Smooth Anti-bacterial platform.

Micro Thread

- Four threads with pitch of 0.45mm (as compared to the more commonly used 0.25mm pitch), leading to less pressure and better blood circulation.
- Micro threads increase the surface area in contact with cortical bone, increasing initial stability.

Double Thread

- Based on the ACME 35° engineering standard, Anker's thread design improves BIC, torsion, and bearing.
- Faster implantation; each rotation deepens the implant 1.8mm.
- Tapered Thread designed to compact crestal bone and redistribute occlusal forces, relieving excessive centralized pressure.

Internal 11° Morse Taper

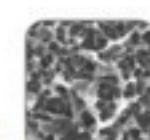

- 11° Morse Taper is self-locking to enhance the connection between fixture and abutment.
- Prevention of micro leakage and bacteria intrusion.

Internal Hexagonal Connection

Antirotational, secure connection between abutment and implant.

Surface Treatment

SLA (unique sandblasting and high-grade semiconductor acid etching) increases surface roughness, amplifying BIC (Bone-Implant Contact).

Apex Design

- Tri-edged, self-drilling and self-tapping apical design reduces risk of damage to the bone, allows angle correction, and prevents reverse rotation while placing/ removing abutments/cover screws.
- Lowers the coefficient of friction with the bone, reducing the possibility of osteonecrosis.
- Blunt apical design minimizes risk to the sinus floor or inferior alveolar nerve.

Fixture

Grade 4 pure titanium with cryogenic treatment for the better biocompatibility and osseointegration.

Abutment

Grade 5 titanium alloy for better balance of biocompatibility and strength.

IMPLANT PACKAGE

1. Reference number
2. Dimensions of Implant
3. Batch code
4. Date of sterilization
5. Expiration date
6. Caution
7. Liaison
8. EC REP
9. Sterilization using irradiation sticker

The package includes a user instruction manual and 4 information stickers for documentation

alliance

IMPLANT REMOVAL

To remove the implant with
No Mount Piece Driver

Outer Cap:

To remove the cover screw with 1.2 Hand Driver

Fixture is secured stably with pure titanium cylinder to prevent intrinsic contact potential difference (prevents corrosion)

COLOR CODING

Ø3.0 Fixture

Ø3.5 Fixture

Ø4.0 Fixture

Ø4.5 Fixture

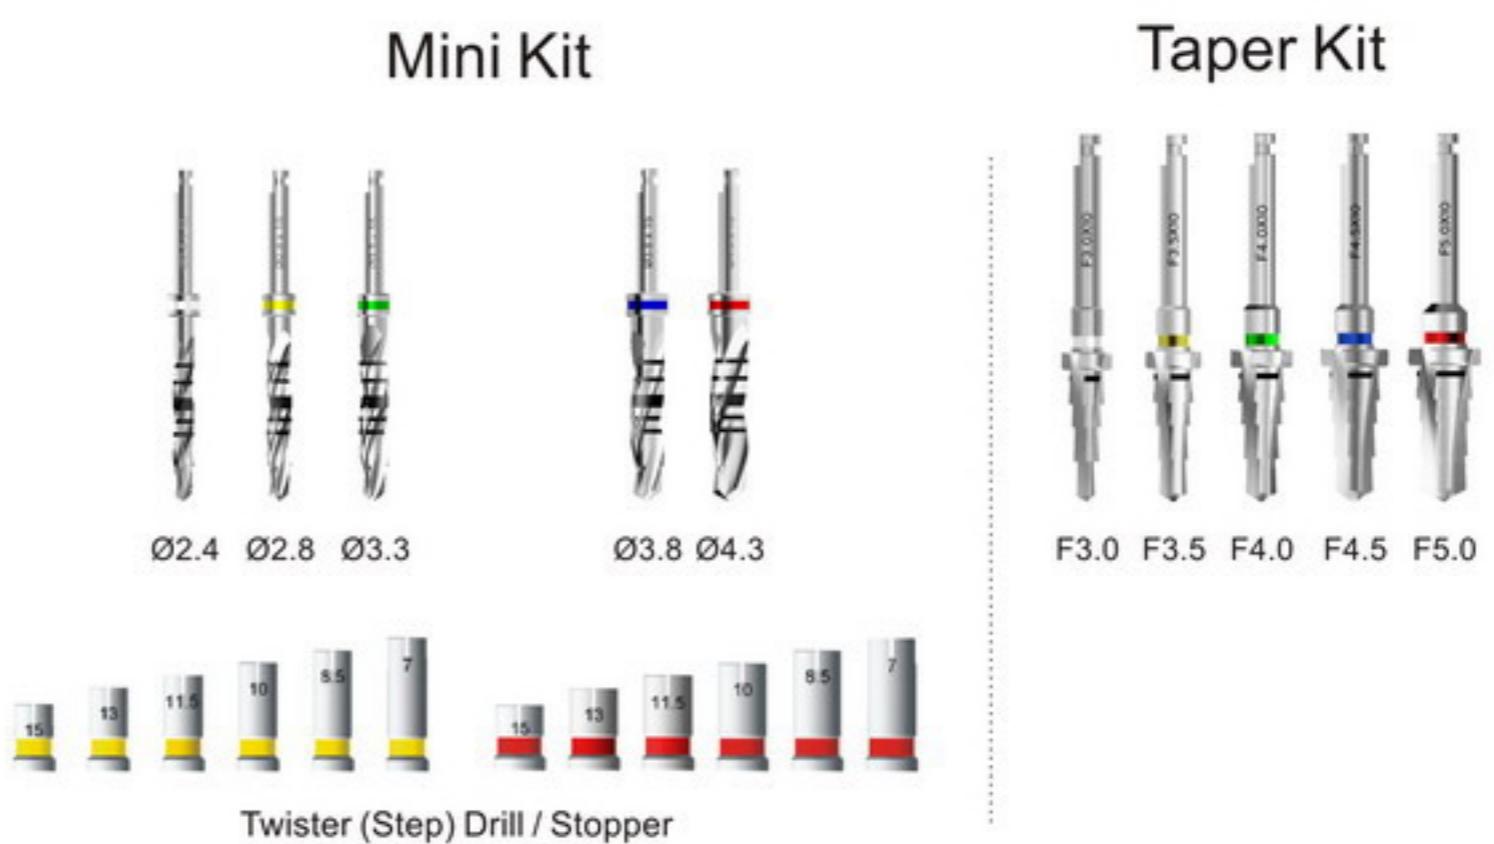

Ø5.0 Fixture

A specific color is assigned to each diameter of the Anker System

Final Drill Size
Ø2.4 → For Ø3.0 Fixture
Ø2.8 → For Ø3.5 Fixture
Ø3.3 → For Ø4.0 Fixture
Ø3.8 → For Ø4.5 Fixture
Ø4.3 → For Ø5.0 Fixture

Stopper
Yellow → For Both Ø2.8 / Ø3.3 Drills
Red → For Both Ø3.8 / Ø4.3 Drills

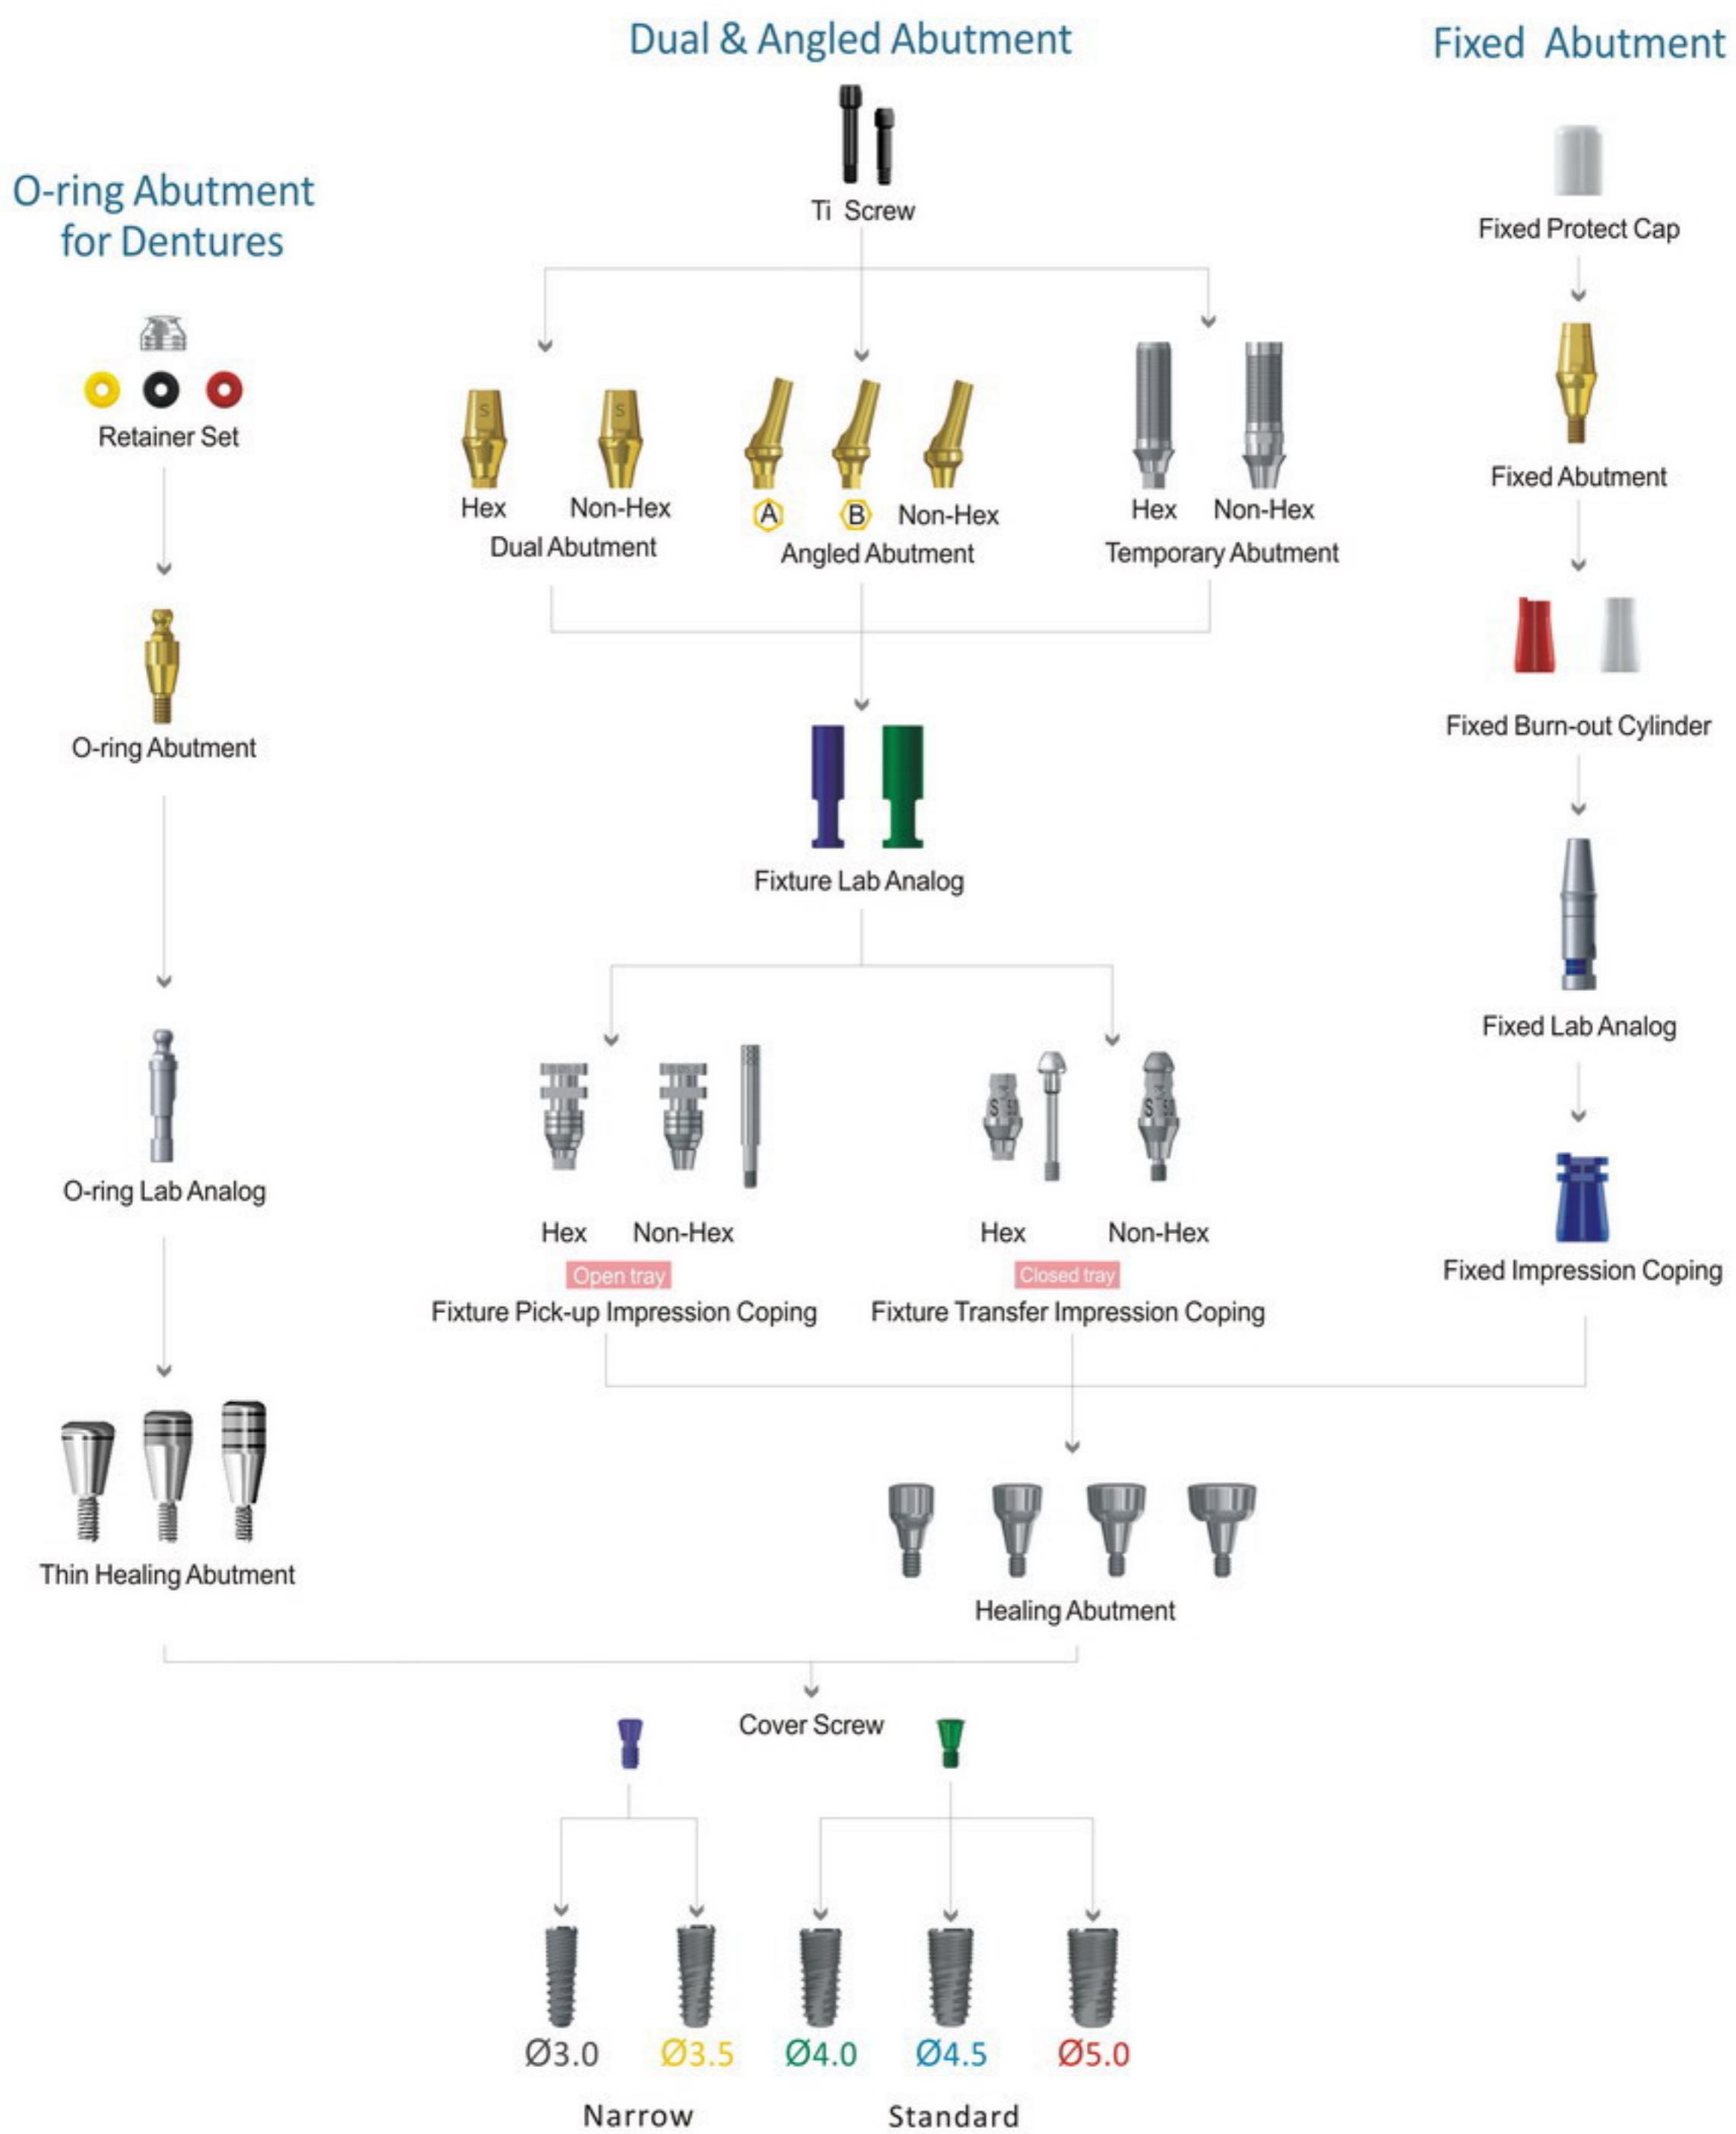

Clear and simple color coding for user guidance

IMPLANTATION CAUTIONS

1. Drill to the appropriate depth using high speed between 800~1200 rpm.
2. In case of strong resistance while inserting the implant into the osteotomy at any point, reverse the implant counter-clockwise approximately 2-3 turns to enable the self-tapping capacity of the implant, then continue to insert the implant.
3. Exceeding the maximum insertion torque of 25Ncm using the No Mount Piece Driver should be avoided. Doing so can cause deformation of the implant or connection and may result in overt compression of the bone.
4. In dense bone (D1 or D2), one may need to widen the implant site with the next diameter to half of the final depth, according to the drill protocol.
5. In case of D4 Bone, it may be better to drill only halfway with the final diameter drill or not use the final diameter drill at all, to achieve sufficient primary stability.
6. The system is designed to be mount-free. Pick up the implant from the vial by using the No Mount Piece Driver. If there is any hindrance during picking up, please inspect whether the O-ring is broken or deteriorated. If so, please immediately report to us, and we will have a replacement for you subsequently.
7. Please rotate the cover screw counter-clockwise before tightening clockwise into the fixture by using the Hex Driver to be sure it engages correctly.
8. The system is separated into Narrow (ø3.0, ø3.5) and Standard (ø4.0, ø4.5, ø5.0) type connections. No Mount Piece Drivers and Fixture Drivers have a Yellow stripe for Narrow Connections or a Green stripe for Standard Connections. Please confirm the correct colored Driver is utilized when placing the implant.

SB-II SERIES FLOWCHART

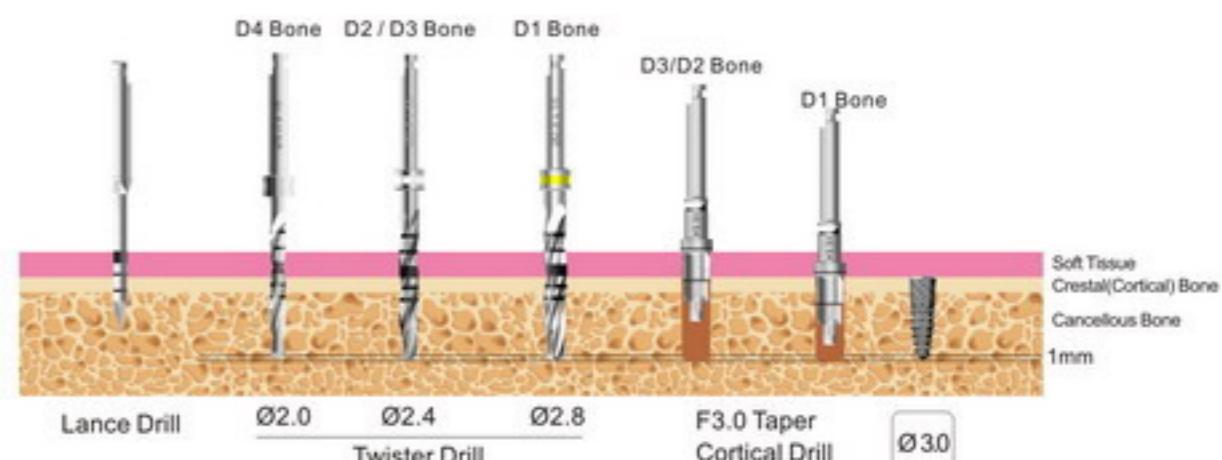

SB-II MINI KIT DRILLING SEQUENCE

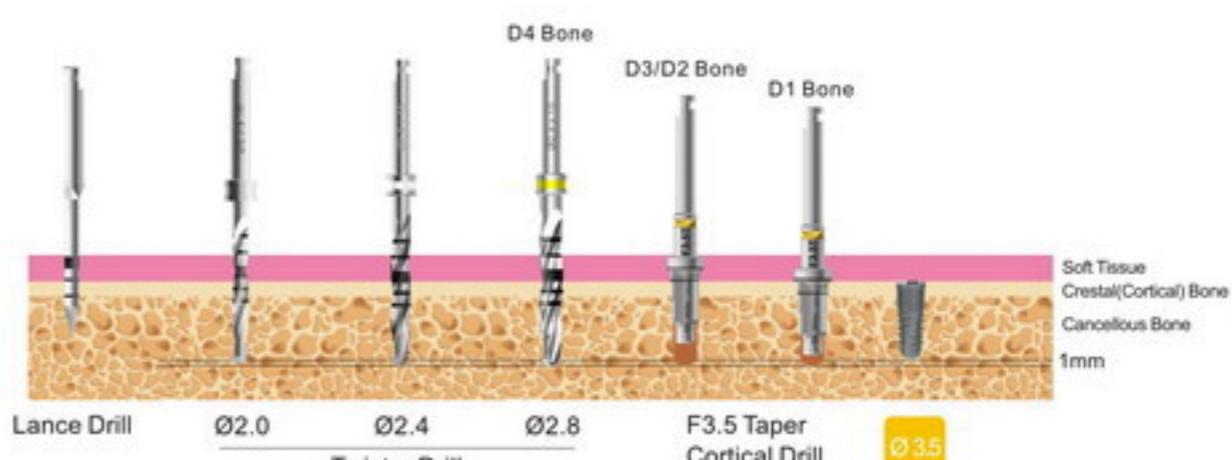

Fixture 3.0x10mm

D4 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill (Drilling to half depth)
D3/D2 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → F3.0 Taper Cortical Drill (Under the black laser line)
D1 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → F3.0 Taper Cortical Drill (Up to stopper)

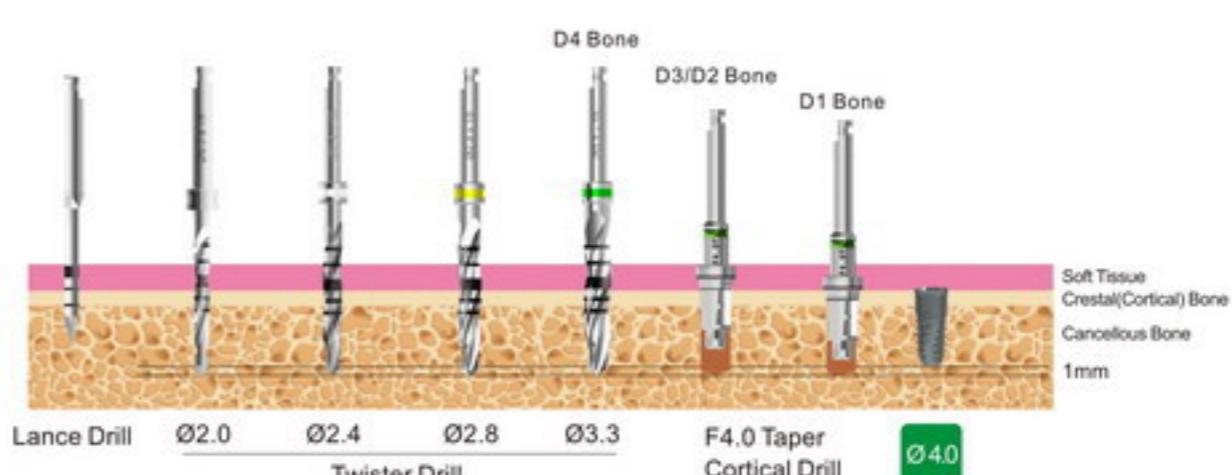

Fixture 3.5x10mm

D4 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill (Drilling to half depth)
D3/D2 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → F3.5 Taper Cortical Drill (Under the black laser line)
D1 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → F3.5 Taper Cortical Drill (Up to stopper)

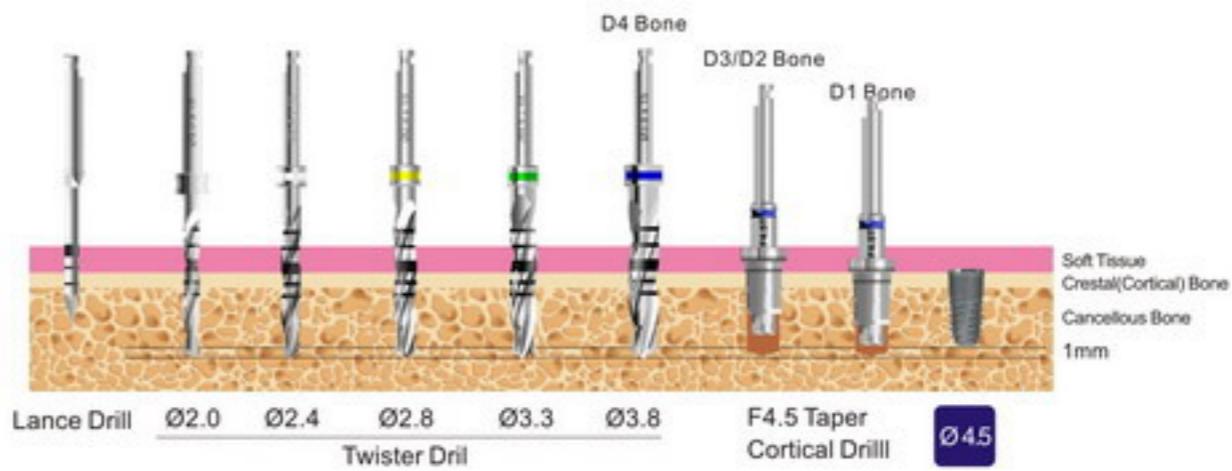

Fixture 4.0x10mm

D4 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill (Drilling to half depth)
D3/D2 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → F4.0 Taper Cortical Drill (Under the black laser line)
D1 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → F4.0 Taper Cortical Drill (Up to stopper)

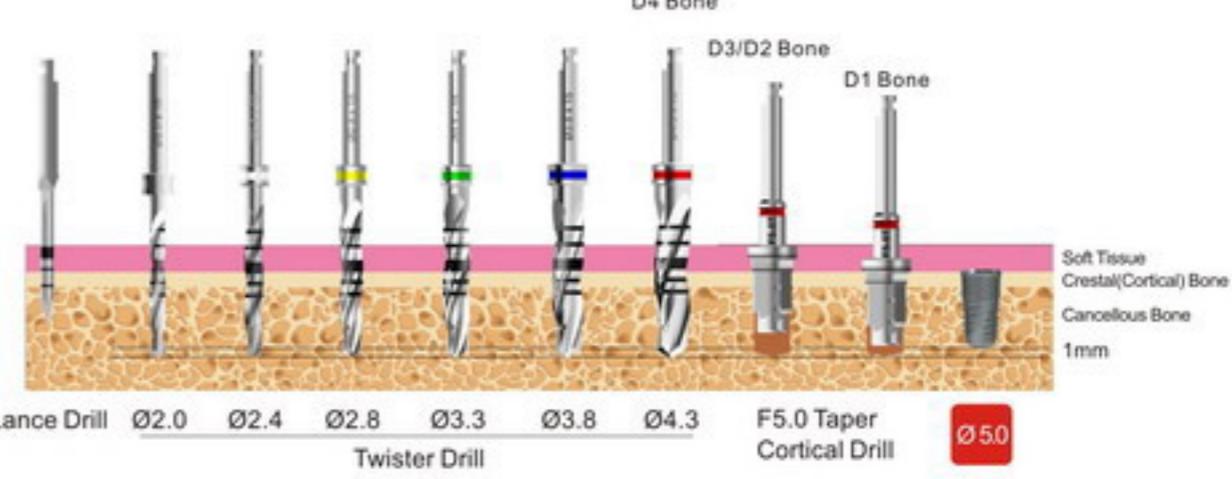

Fixture 4.5x10mm

D4 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → Ø3.8 Twister Drill (Drilling to half depth)
D3/D2 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → Ø3.8 Twister Drill → F4.5 Taper Cortical Drill (Under the black laser line)
D1 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → Ø3.8 Twister Drill → F4.5 Taper Cortical Drill (Up to stopper)

Fixture 5.0x10mm

D4 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → Ø3.8 Twister Drill → Ø4.3 Twister Drill (Drilling to half depth)
D3/D2 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → Ø3.8 Twister Drill → Ø4.3 Twister Drill → F5.0 Taper Cortical Drill (Under the black laser line)
D1 Bone	Lance Drill → Ø2.0mm Twister Drill → Ø2.4 Twister Drill → 2.8 Twister Drill → Ø3.3 Twister Drill → Ø3.8 Twister Drill → Ø4.3 Twister Drill → F5.0 Taper Cortical Drill (Up to stopper)

The above surgical sequences are recommended for conventional two-stage implantation.

For flapless, immediate placement, immediate loading, or other surgical procedures,
please modify the procedures upon your clinical judgment.

SB-II TAPER KIT DRILLING SEQUENCE

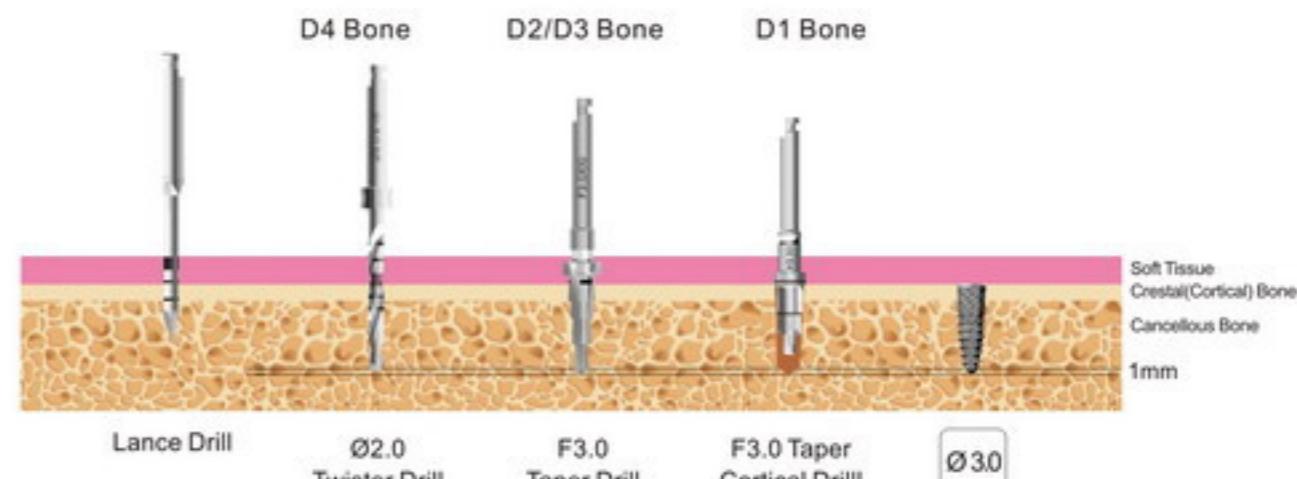

Fixture 3.0x10mm

D4 Bone Lance Drill → Ø2.0mm Twist Drill → F3.0 Taper Drill

D3/D2 Bone Lance Drill → Ø2.0mm Twist Drill → F3.0 Taper Drill

Extension Piece Driver

ITEM	H	REF No.
Extension Piece Driver	27.8mm	AED002S

- ◎ It can be used if the available vertical space in single tooth gaps in the region of the anterior teeth is insufficient during inserting.
- ◎ It can also combine with No Mount Drill for implantation

Twister Drill (Long)

ITEM	H	TIP	REF No.
Ø2.0 Twister Drill	2.0mm	0.58mm	ATWD 2015
Ø2.4 Twister Drill	2.4mm	0.58mm	ATWD 2415
Ø2.8 Twister Drill	2.8mm	0.69mm	ATWD 2815
Ø3.3 Twister Drill	3.3mm	0.81mm	ATWD 3315
Ø3.8 Twister Drill	3.8mm	0.95mm	ATWD 3815
Ø4.3 Twister Drill	4.3mm	1.1mm	ATWD 4315

- ◎ The specification of Twister Drills are tailored according to the implant sizes adequately
- ◎ The length of drill is exclusive of tip
- ◎ The recommended rotation speed is 800-1200rpm

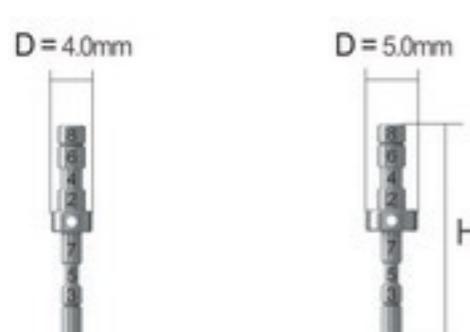

Taper Cortical Drill

ITEM	REF No.
F3.0 Taper Cortical Drill	ATCD30
F3.5 Taper Cortical Drill	ATCD35
F4.0 Taper Cortical Drill	ATCD40
F4.5 Taper Cortical Drill	ATCD45
F5.0 Taper Cortical Drill	ATCD50

- ◎ The specification of Straight Cortical Drills are tailored according to the implant sizes adequately
- ◎ The recommended rotation speed is 800-1200rpm

Parallel Pins

ITEM	H	REF No.
Ø4.0 Parallel Pins	20mm	APP40
Ø5.0 Parallel Pins	20mm	APP50

- ◎ Used for checking osteotomy direction

No Mount Piece Driver (Short)

ITEM	H	REF No.
Narrow No Mount Piece Driver S	27mm	ANMPD001S(N)(I)
Standard No Mount Piece Driver S	27mm	ANMPD001S(S)

- ◎ Used for connecting with the handpiece in order to retrieve the implant
- ◎ **Narrow** : Ø3.0 / Ø3.5 Fixture
- ◎ **Standard** : Ø4.0 / Ø4.5 / Ø5.0 Fixture
- ◎ The maximum insertion torque by using No Mount Piece Driver if it is excessive 25 Ncm must to be prohibited

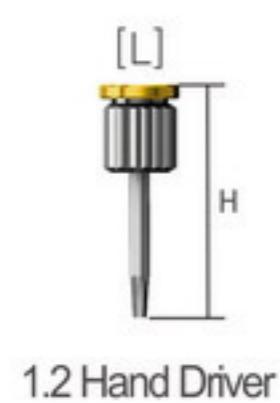

Fixture Torque Driver (Long)

ITEM	H	REF No.
Narrow Fixture Torque Driver L	24mm	AFD001L(N)
Standard Fixture Torque Driver L	24mm	AFD001L(S)

- ◎ Use a Simple / Torque Wrench
- ◎ **Narrow:** Ø3.0 / Ø3.5 Fixture
- ◎ **Standard:** Ø4.0 / Ø4.5 / Ø5.0 Fixture

1.2 Hand Driver

1.2 Hand Driver

ITEM	H	REF No.
1.2 Hand Driver	26mm	AHD12L

- ◎ It could be used to remove Cover Screw, Healing Abutment, Fixed Abutment (Ø4.5mm, Ø5.0mm, Ø6.0mm and Ø7.0mm), Ti Screw
- ◎ Hand Driver could be used manually

1.2 Torque Driver

1.2 Torque Driver

ITEM	H	REF No.
1.2 Torque Driver	22mm	ATD12L

- ◎ It could be used to remove Cover Screw, Healing Abutment, Fixed Abutment (Ø4.5mm, Ø5.0mm, Ø6.0mm and Ø7.0mm), Ti Screw
- ◎ Torque Driver could be used with Simple / Torque Wrench

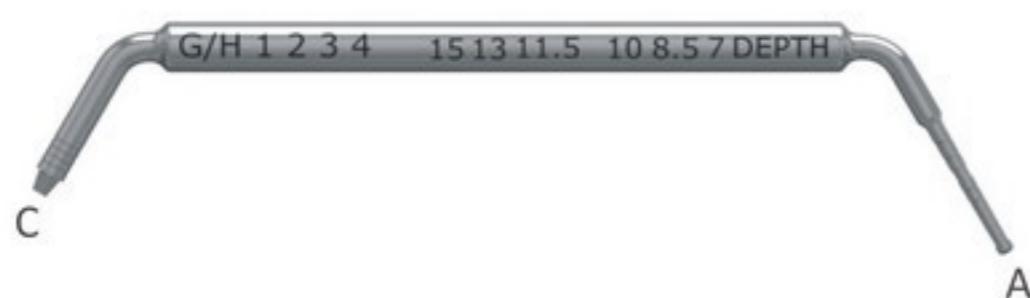

Simple Wrench

REF No.
CITQW-1185A

- ◎ "IN" - Inserting clockwise
- ◎ "OUT" - Withdrawing counter-clockwise
- ◎ Sterilization by autoclaving is 134°C (273°F)

Depth Gauge

REF No.
ADG001

- ◎ A (DEPTH) is used to identify the desired depth has been reached
The laser markings of A among the lengths from 7-15mm
- ◎ C (G/H) is used to identify the gingival height
The laser markings of C are numerical

PURCHASING ITEMS

Fixed Piece Driver

ITEM	H	REF No.
Fixed Piece Driver S	22.5mm	AFPD001S

◎It could be used to place or remove Ø4.0mm Fixed Abutment

Fixed Torque Driver

ITEM	H	REF No.
Fixed Torque Driver L	24mm	AFTD001L

◎It could be used to place or remove Ø4.0mm Fixed Abutment

◎Fixed Torque Driver could be used with Simple/Torque Wrench

Stopper (Medium)

ITEM	H	REF No.
7.0 Drill Stopper	16.2mm	AST4A07
8.5 Drill Stopper	14.7mm	AST4A08
10 Drill Stopper	13.2mm	AST4A10
11.5 Drill Stopper	11.7mm	AST4A11
13 Drill Stopper	10.2mm	AST4A13
15 Drill Stopper	8.2mm	AST4A15

◎Used for self-stopping

◎Available for Ø2.0 Ø2.4, Ø2.8, Ø3.3 drills

Stopper (Large)

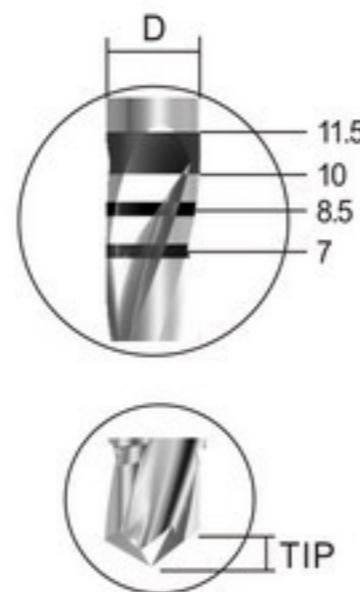

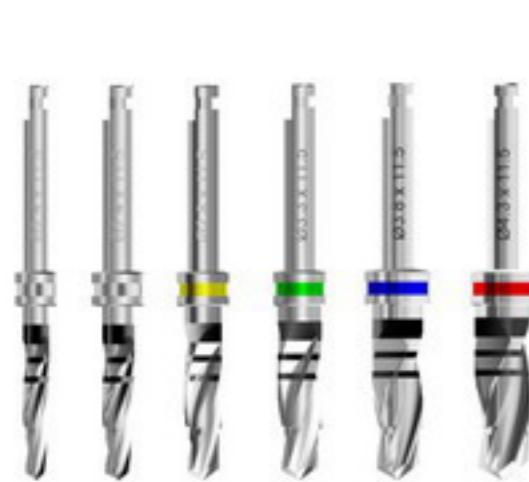

ITEM	H	REF No.
7.0 Drill Stopper	16.2mm	AST5A07
8.5 Drill Stopper	14.7mm	AST5A08
10 Drill Stopper	13.2mm	AST5A10
11.5 Drill Stopper	11.7mm	AST5A11
13 Drill Stopper	10.2mm	AST5A13
15 Drill Stopper	8.2mm	AST5A15

◎Used for self-stopping

◎Available for Ø3.8, Ø4.3 drills

PURCHASING ITEMS

Twist Drill (Short)

ITEM	D	TIP	REF No.
Ø2.0 Twister Drill	2.0mm	0.6mm	ATWD 2011
Ø2.4 Twister Drill	2.4mm	0.6mm	ATWD 2411
Ø2.8 Twister Drill	2.8mm	0.7mm	ATWD 2811
Ø3.3 Twister Drill	3.3mm	0.8mm	ATWD 3311
Ø3.8 Twister Drill	3.8mm	0.95mm	ATWD 3811
Ø4.3 Twister Drill	4.3mm	1.1mm	ATWD 4311

◎The specification of Twister Drills are tailored according to the implant sizes adequately

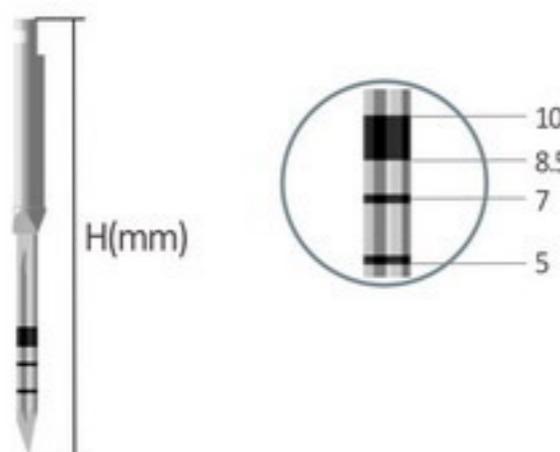

◎The length of drill is exclusive of tip

◎The recommended rotation speed is 800-1200rpm

Taper Surgical Kit

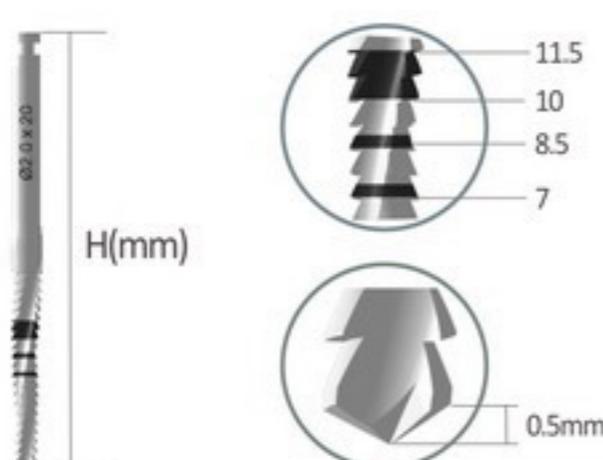

Lance Drill

ITEM	H	D	REF No.
Lance Drill	33mm	2mm	ALD001

- ◎ Used for making implant position
- ◎ Initial implant site preparation which determines both density and depth of drilling
- ◎ The sharpness tip of the drill is to minimize the deviation while drilling
- ◎ The recommended rotation speed is 800-1200rpm

Sidecut Drill

ITEM	H	D	REF No.
Sidecut Drill	35mm	2mm	ASD001

- ◎ Used for incline trimming to align the drilling position
- ◎ The recommended rotation speed is 800-1200rpm

Extension Piece Driver

ITEM	H	REF No.
Extension Piece Driver	27.8mm	AED002S

- ◎ It can be used if the available vertical space in single tooth gaps in the region of the anterior teeth is insufficient during inserting
- ◎ It can also combine with No Mount Drill for implantation

Ø2.0 Twister Drill

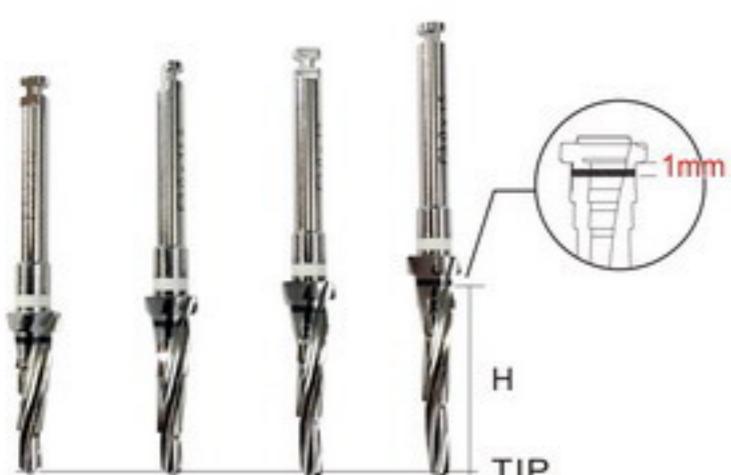

ITEM	H	TIP	REF No.
Ø2.0 Twister Drill	8.5mm	0.58mm	ATWD2008
Ø2.0 Twister Drill	10mm	0.58mm	ATWD2010
Ø2.0 Twister Drill	11.5mm	0.58mm	ATWD2011
Ø2.0 Twister Drill	13mm	0.58mm	ATWD2013
Ø2.0 Twister Drill	15mm	0.49mm	ATWD2015

◎The length of drill is exclusive of tip

◎The recommended rotation speed is 800-1200 rpm

F3.0 Taper Drill

ITEM	H	TIP	REF No.
F3.0 Taper Drill	10mm	0.52mm	ATAD3010
F3.0 Taper Drill	11.5mm	0.52mm	ATAD3011
F3.0 Taper Drill	13mm	0.52mm	ATAD3013
F3.0 Taper Drill	15mm	0.52mm	ATAD3015

◎Tapered design for Ø3.0mm Fixture

◎The length of H is corresponding with the implant height, and is allowed up to 1mm longer drilling above the black laser line upon the clinical judgement

◎The recommended rotation speed is 800-1200rpm

F3.5 Taper Drill

ITEM	H	TIP	REF No.
F3.5 Taper Drill	8.5mm	0.7mm	ATAD3508
F3.5 Taper Drill	10mm	0.72mm	ATAD3510
F3.5 Taper Drill	11.5mm	0.72mm	ATAD3511
F3.5 Taper Drill	13mm	0.74mm	ATAD3513
F3.5 Taper Drill	15mm	0.74mm	ATAD3515

◎Tapered design for Ø3.5mm Fixture

◎The length of H is corresponding with the implant height, and is allowed up to 1mm longer drilling above the black laser line upon the clinical judgement

◎The recommended rotation speed is 800-1200rpm

F4.0 Taper Drill

ITEM	H	TIP	REF No.
F4.0 Taper Drill	7mm	0.78mm	ATAD4007
F4.0 Taper Drill	8.5mm	0.78mm	ATAD4008
F4.0 Taper Drill	10mm	0.79mm	ATAD4010
F4.0 Taper Drill	11.5mm	0.79mm	ATAD4011
F4.0 Taper Drill	13mm	0.82mm	ATAD4013
F4.0 Taper Drill	15mm	0.82mm	ATAD4015

◎Tapered design for Ø4.0mm Fixture

◎The length of H is corresponding with the implant height, and is allowed up to 1mm longer drilling above the black laser line upon the clinical judgement

◎The recommended rotation speed is 800-1200rpm

F4.5 Taper Drill

ITEM	H	TIP	REF No.
F4.5 Taper Drill	7mm	0.89mm	ATAD4507
F4.5 Taper Drill	8.5mm	0.89mm	ATAD4508
F4.5 Taper Drill	10mm	0.95mm	ATAD4510
F4.5 Taper Drill	11.5mm	0.95mm	ATAD4511
F4.5 Taper Drill	13mm	1.01mm	ATAD4513
F4.5 Taper Drill	15mm	1.01mm	ATAD4515

- ◎ Tapered design for Ø4.5mm Fixture
- ◎ The length of H is corresponding with the implant height, and is allowed up to 1mm longer drilling above the black laser line upon the clinical judgement
- ◎ The recommended rotation speed is 800-1200rpm

F5.0 Taper Drill

ITEM	H	TIP	REF No.
F5.0T aper Drill	7mm	1.07mm	ATAD5007
F5.0 Taper Drill	8.5mm	1.07mm	ATAD5008
F5.0 Taper Drill	10mm	1.12mm	ATAD5010
F5.0 Taper Drill	11.5mm	1.12mm	ATAD5011
F5.0Taper Drill	13mm	1.18mm	ATAD5013
F5.0 Taper Drill	15mm	1.19mm	ATAD5015

- ◎ Tapered design for Ø5.0mm Fixture
- ◎ The length of H is corresponding with the implant height, and is allowed up to 1mm longer drilling above the black laser line upon the clinical judgement
- ◎ The recommended rotation speed is 800-1200rpm

Taper Cortical Drill

ITEM	REF No.
F3.0 Taper Cortical Drill	ATCD30
F3.5 Taper Cortical Drill	ATCD35
F4.0 Taper Cortical Drill	ATCD40
F4.5 Taper Cortical Drill	ATCD45
F5.0 Taper Cortical Drill	ATCD50

- ◎ The specification of Taper Cortical Drills are tailored according to the implant sizes adequately
- ◎ The recommended rotation speed is 800-1200rpm

Parallel Pins

ITEM	H	REF No.
Ø4.0 Parallel Pins	20mm	APP40
Ø5.0 Parallel Pins	20mm	APP50

◎Used for checking osteotomy direction

No Mount Piece Driver

ITEM	H	REF No.
Narrow No Mount Piece Driver S	27mm	ANMPD001S(N)(I)
Narrow No Mount Piece Driver L	32mm	ANMPD001L(N)(I)
Standard No Mount Piece Driver S	27mm	ANMPD001S(S)
Standard No Mount Piece Driver L	32mm	ANMPD001L(S)

◎Used for connecting with the handpiece in order to retrieve the implant
 ◎Narrow: Ø3.0 / Ø3.5 Fixture
 ◎Standard: Ø4.0 / Ø4.5 / Ø5.0 Fixture
 ◎The maximum insertion torque by using No Mount Piece Driver if it is excessive 25 Ncm must to be prohibited

Fixture Torque Driver

ITEM	H	REF No.
Narrow Fixture Torque Driver S	19mm	AFD001S(N)
Narrow Fixture Torque Driver L	24mm	AFD001L(N)
Standard Fixture Torque Driver S	19mm	AFD001S(S)
Standard Fixture Torque Driver L	24mm	AFD001L(S)

◎Use a Simple / Torque Wrench
 ◎Narrow: Ø3.0 / Ø3.5 Fixture
 ◎Standard: Ø4.0 / Ø4.5 / Ø5.0 Fixture

1.2 Hand/ Torque Driver

ITEM	H	REF No.
1.2 Hand Driver	21mm	AHD12S
1.2 Hand Driver	26mm	AHD12L
1.2 Torque Driver	16mm	ATD12S
1.2 Torque Driver	22mm	ATD12L

◎It could be used to remove Cover Screw, Healing Abutment, Fixed Abutment (Ø4.5mm, Ø5.0mm, Ø6.0mm and Ø7.0mm), Ti Screw
 ◎Hand Driver could be used manually
 ◎Torque Driver could be used with Simple/Torque Wrench

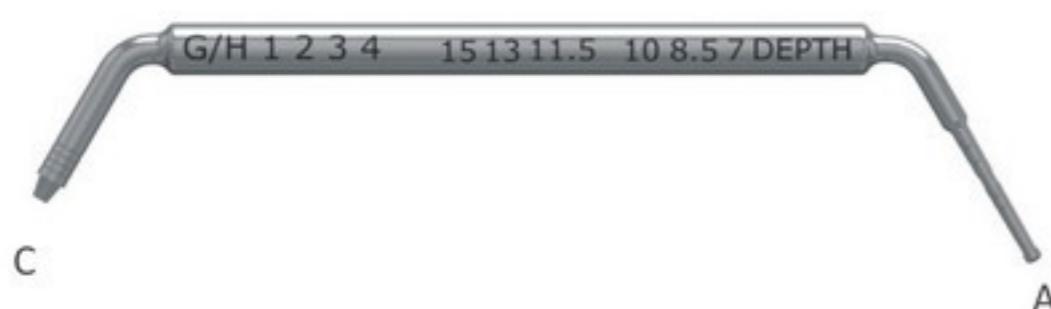

Torque Wrench

REF No.
ATW001

- ◎ Readable torque indication
- ◎ "IN" - Inserting clockwise
- "OUT" - Withdrawing counter-clockwise
- ◎ Sterilization by autoclaving is 137°C (278°F)

Depth Gauge

REF No.
ADG001

- ◎ A (DEPTH) is used to identify the desired depth has been reached
The laser markings of A among the lengths from 7-15mm
- ◎ C (G/H) is used to identify the gingival height
The laser markings of C are numerical

PURCHASING ITEMS

Fixed Torque Driver

ITEM	H	REF No.
Fixed Piece Driver S	19mm	AFPD001S
Fixed Torque Driver L	24mm	AFTD001L

- ◎ It could be used to place or remove Ø4.0mm Fixed Abutment
- ◎ Torque Fixed Driver could be used with Simple/Torque Wrench

O-ring Torque Driver

ITEM	H	REF No.
O-ring Torque Driver	20mm	AOTDB001S
	24mm	AOTDB001L
	30mm	AOTDB001XL

- ◎ Used to place or remove O-ring Abutment
- ◎ O-ring Driver could be used with Torque Wrench

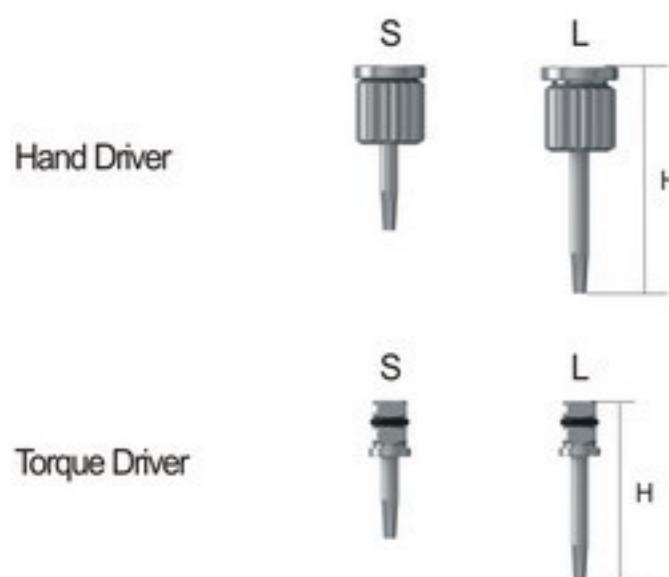

Torque Guide

Products	Product description	Installation torque (Ncm)
Cover screw	 	10 / Ncm
Healing Abutment	   	10 / Ncm
Fixture Transfer Impression Coping	  	Fixture Pick-up Impression Coping  
Dual Abutment	   	
Angled Abutment	 	Ti Screw  
Temporary Abutment		
Fixed Abutment	   	30 / Ncm
O-ring Abutment		

Prosthetic Kit

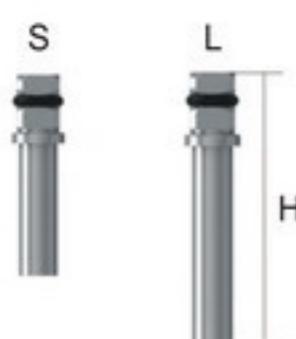

1.2 Hand / Torque Drivers

ITEM	H	REF No.
1.2 Hand Driver	21mm	AHD12S
1.2 Hand Driver	26mm	AHD12L
1.2 Torque Driver	16mm	ATD12S
1.2 Torque Driver	22mm	ATD12L

- ◎ It could be used to remove Cover Screw, Healing Abutment, Fixed Abutment ($\varnothing 4.5\text{mm}$, $\varnothing 5.0\text{mm}$, $\varnothing 6.0\text{mm}$ and $\varnothing 7.0\text{mm}$), Ti Screw
- ◎ Hand Driver could be used manually
- ◎ Torque Driver could be used with Simple/Torque Wrench

Fixed Torque Driver

ITEM	H	REF No.
Fixed Torque Driver S	19mm	AFTD001S
Fixed Torque Driver L	24mm	AFTD001L

- ◎ It could be used to place or remove $\varnothing 4.0\text{mm}$ Fixed Abutment
- ◎ Torque Fixed Driver could be used with Simple/Torque Wrench

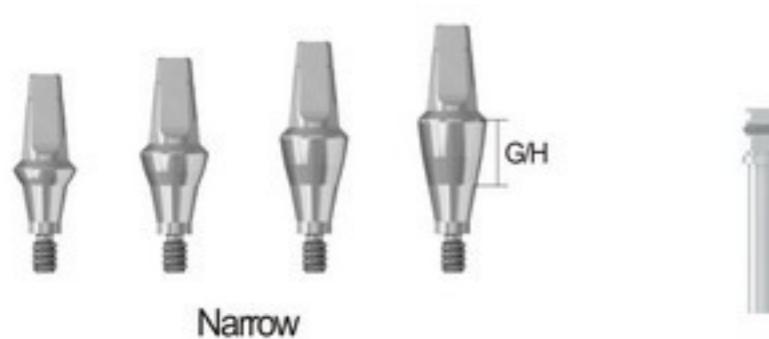

O-ring Driver PURCHASING ITEMS

ITEM	H	REF No.
O-ring Torque Driver	20mm	AOTDB001S
O-ring Torque Driver	24mm	AOTDB001L
O-ring Torque Driver	30mm	AOTDB001XL

- ◎ Used to place or remove O-ring Abutment
- ◎ O-ring Driver could be used with Torque Wrench

0° Simabutment

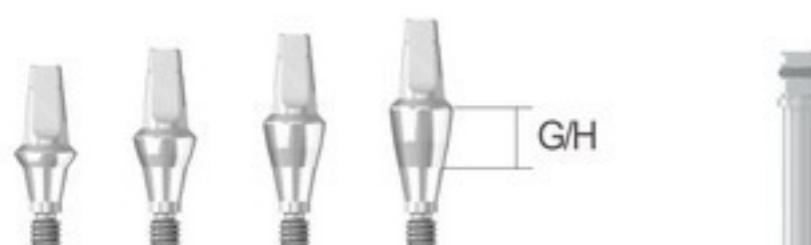

ITEM	G/H	REF No.
0° Simabutment	1mm	SBTI 4610(I)
0° Simabutment	2mm	SBTI 4620(I)
0° Simabutment	3mm	SBTI 4630(I)
0° Simabutment	4mm	SBTI 4640(I)

- ◎ Used for simulating occlusion after the abutment is placed, and determine the gingival height
- ◎ Narrow: $\varnothing 3.0\text{mm}$ Fixture
- ◎ Use a Fixed Driver
- ◎ Material: Aluminum

Prosthetic Kit

0° Simabutment

Narrow

ITEM	G/H	REF No.
0° Simabutment	1mm	SBTI 4610
0° Simabutment	2mm	SBTI 4620
0° Simabutment	3mm	SBTI 4630
0° Simabutment	4mm	SBTI 4640

- ◎ Used for simulating occlusion after the abutment is placed, and determine the gingival height
- ◎ **Narrow:** Ø3.5mm Fixture
- ◎ Use a Fixed Driver
- ◎ Material: Aluminum

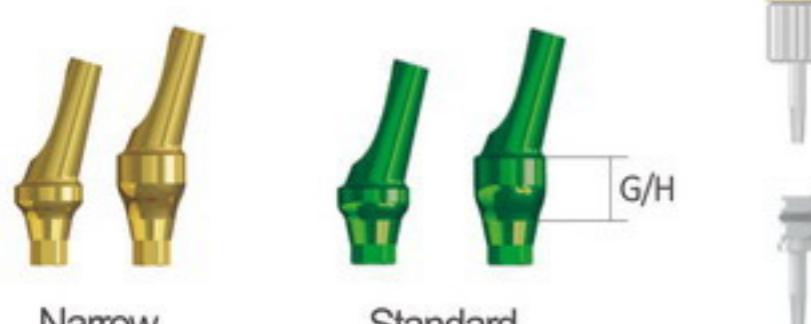

Standard

ITEM	G/H	REF No.
0° Simabutment	1mm	SBTI 4611
0° Simabutment	2mm	SBTI 4621
0° Simabutment	3mm	SBTI 4631
0° Simabutment	4mm	SBTI 4641

- ◎ Used for simulating occlusion after the abutment is placed, and determine the gingival height
- ◎ **Standard:** Ø4.0mm / Ø4.5mm / Ø5.0mm Fixture
- ◎ Use a 1.2 Hand/Torque Driver
- ◎ Material: Aluminum

17° Simabutment

Narrow

ITEM	G/H	REF No.
17° Simabutment	2mm	SBTI 4320A
17° Simabutment	4mm	SBTI 4340A
17° Simabutment	2mm	SBTI 4520A
17° Simabutment	4mm	SBTI 4540A

- ◎ Used for simulating occlusion after the abutment is placed, and determine the gingival height
- ◎ **Narrow:** Ø3.5mm Fixture
- ◎ **Standard:** Ø4.0mm / Ø4.5mm / Ø5.0mm Fixture
- ◎ Use a 1.2 Hand/ Torque Driver
- ◎ Material: Aluminum

25° Simabutment

ITEM	G/H	REF No.
25° Simabutment	2mm	SBTI 4320A25
25° Simabutment	4mm	SBTI 4340A25
25° Simabutment	2mm	SBTI 4520A25
25° Simabutment	4mm	SBTI 4540A25

- ◎ Used for simulating occlusion after the abutment is placed, and determine the gingival height
- ◎ **Narrow:** Ø3.5mm Fixture
- ◎ **Standard:** Ø4.0mm / Ø4.5mm / Ø5.0mm Fixture
- ◎ Use a 1.2 Hand/Torque Driver
- ◎ Material: Aluminum

MILESTONE

2008	03	Registered Alliance Global Technology Co. Ltd. In Kaohsiung Science Park
	07	Signed co-development agreement with Taipei Medical University
2009	03	Developed implants, abutments, bone nail and bone plate
2010	02	Obtained ISO 13485, ISO9001, CE, TGMP
	05	Applied for TFDA and U.S. FDA 510K
	09	Collaboration with Kaohsiung Medical University Animal experiment conducted
	10	Collaboration with National Cheng-Kung University in SLA-Plus
2011	01	Collaboration with Dr. Jian-Tang Zhou ; Acquisition of patents for Tony Cap in Taiwan, Japan and China
	03	Obtained TFDA -Bone Level Seires
	03	Obtained SLA-Cap Surface Treatment Patent (Dual treated with phosphate and calcium)
2012	04	Obtained TFDA -Tissue Level & Mini Implant Seires
	10	Launched the Dental Implantology Training Center in Philippines
2013	12	Obtained FDA510K
2014	12	Obtained CFDA - Bone-Level Series
2016	10	Clinical Experiment in Kaohsiung Medical University
2017	02	Established USA Branch in LA
	06	Established 3D Digital Dental Lab
	08	Obtained CFDA - Class III
	12	Obtained TFDA - Ti-Mesh
